

ACO VISION ENGINEERING

A workshop on Accountable Care Organizations, conducted at your facility with your executive team.

“ACO Vision Engineering” is a three hour, content packed workshop and forum designed to bring business, clinical and I.T. professionals together to develop the initial roadmap and determine transformation requirements. The session provides a great overview for HIT stakeholders who are contemplating their adoption strategy and formulating next steps.

The inexorable cost of healthcare is unsustainable ... Providers who can proactively reshape their healthcare business model will enjoy enhanced care performance and competitive advantages. Your organization may already have most of the expertise and infrastructure required to deploy a pay for performance solution. Evaluating your people, processes, organizational structure and current environment is fundamental to any initiative. This workshop accelerates the processes, identifies gaps and empowers senior leadership for the successful pursuit. Your organization will thrive as it emerges with a deeper knowledge and the vision to change, measure and manage new healthcare paradigms.

Ascendian Healthcare Consulting is a national leader in HIT consulting & training services. Ascendian is known for our ability to help healthcare organizations quickly and cost effectively adopt technology and innovative practices.

Attendees will learn:

- The motivation behind ACO
- The structure of an ACO
- Management of the effort
- Infrastructure requirements
- The assessment of moving to ACM
- How to successfully launch

Payment:
